

iTech Medical Signs Manufacturing Agreement

Thought Technology Ltd. and iTech Medical Reach Three Year Exclusive Agreement

iTech Medical signs an exclusive manufacturing agreement with Thought Technology Ltd. for its proprietary Muscle Pattern Recognition (MPR) technology. The agreement is expected to assist in iTech Medical's US, CDN and EU regulatory filings as the Company begins commercialization of its Muscle Pattern Recognition[®] technology in North America and Europe.

HUNTINGTON BEACH, CA (February 11, 2010) – iTech Medical, (OTCBB: [IMSU](#), FWB: [OIM](#)), an information technology company, announced today that it has signed an exclusive, three year manufacturing agreement with Thought Technology Ltd. of Montreal, Quebec for the Company's proprietary Muscle Pattern Recognition (MPR) technology. MPR is a patented clinical tool that analyzes patterns of muscle recruitment. It provides detailed physiological information on muscle function that can assist in the diagnosis and treatment of back and neck injuries and illness.

"We have been working with Thought Technology for over ten years and during that time have seen our relationship grow from contract manufacturing to one that now includes collaboration on product development," explained Steeve Asselin, Vice President, Research and Development for iTech Medical. "As we move into the commercialization phase of the MPR technology, we expect to be working even more closely with them, particularly on our US, Canadian and European regulatory filings."

"We are very excited about continuing our long-standing relationship with iTech Medical," said Dr. Hal Myers, President and co-founder of Thought Technology. "Over the years, we have built and developed a strong regulatory team to work with own products and those of our partners. Thought Technology has obtained and maintained ISO 13485 and CE certification for our organization and our products which means we can support companies like iTech Medical in their European and FDA regulatory filings. We believe the agreement with iTech Medical will provide an opportunity for both companies to grow in the field of managing back and neck pain."

iTech Medical reported that it expects to complete the clinical testing of its MPR System in 2010 and that, based on positive results, it will move the technology into commercialization in North America and Europe before the end of the year.

"Having a strong, reliable manufacturer for our MPR equipment is vital to us because of its importance to our commercial and regulatory programs," said Wayne Cockburn, President and CEO of iTech Medical. "With over half a million instruments sold around the world, and with a distribution network encompassing over 150 distributors and dealers in 50 countries around the world, we believe that with the Thought Technology agreement, we are setting the stage for a corporate partnership that has the ability to grow beyond its current mandate to potentially include new product development and product distribution."

About Thought Technology Ltd.

Founded in 1975, Thought Technology is the world's leading biofeedback and psycho-physiological instrument manufacturer. Thought Technology's instrumentation not only monitors and records a wide variety of physiological and mechanical signals, but also analyzes and feeds back information in real time, through a variety of auditory and visual means.

Forward-Looking and Cautionary Statements

This news release contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995 as contained in Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934 that reflect management's current views and estimates regarding future market conditions, company performance and financial results, business prospects, new strategies, the competitive environment and other events. You can identify these statements by the fact that they use words such as "anticipate," "believe," "estimate," "expect," "intend," "project," "plan," "outlook," and other words and terms of similar meaning. These statements involve a number of risks and uncertainties that could cause actual results to materially differ from the potential results discussed in the forward-looking statements. Among the factors that could cause actual results and outcomes to differ materially from those contained in such forward-looking statements are the following: general economic conditions, acquisitions and development of new businesses, divestitures, product availability, sales volumes, pricing actions and promotional activities of our competitors, profit margins, weather, changes in law or regulations, foreign currency fluctuation, availability of suitable real estate locations, our ability to react to a disaster recovery situation, and the impact of labor markets and new product introductions on our overall profitability. A further list and description of these risks, uncertainties and other matters can be found in the company's annual report and other reports filed from time to time with the Securities and Exchange Commission, including, but not limited to, iTech Medical's (formerly Impact Medical Solutions, Inc.) Annual Report on Form 10-K

filed with the SEC on April 15, 2009. iTech Medical cautions that the foregoing list of important factors is not complete and assumes no obligation to update any forward-looking statements that it may make.
